

Digital Literacy Project Report

Name: Naincy Chandra

Course Code: CSE0001

Course Title: Digital Literacy

Branch: B.Tech AI ML (First Year)

Introduction

This project was given to help us understand how digital tools are actually used in real life. These days, almost everything we do is connected to the internet, so knowing how to use it properly is important. While working on this project, I got to try out different platforms and also learned basic things about online safety. In the beginning, I didn't really understand everything clearly and some parts felt confusing. But after doing each task step by step, things started making more sense. Overall, it was a useful experience and not just a normal assignment.

Task 1: Digital Literacy Infographic

For this task, I used Canva to create an infographic. I included some basic points about digital literacy, safe internet practices, and tools that students can use. I tried to keep the design simple so that anyone can understand it easily without too much effort. One problem I faced was adjusting all the content in one page without making it look too crowded. I had to change the layout a few times before finalizing it. It took some time, but I think it turned out fine in the end. This task was actually a bit interesting because it was more practical than theory.

Task 2: Student Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. Earlier, I had only heard about these platforms but never really explored them properly. While doing this task, I understood their basic use. GitHub is helpful for uploading and managing projects, LinkedIn is useful for building a professional profile, and Kaggle is mainly for learning data-related skills and exploring datasets

I added my basic details like education and branch on these platforms. On Kaggle, I looked at some datasets and notebooks just to get an idea of how it works. It

felt new at first, but also interesting. I think if I keep using it, I will understand it better over time. In the coming years, I plan to update all these profiles regularly as I learn new things. This task made me realize that having an online presence can actually be useful for future internships and opportunities.

Task 3: Coding and Collaboration Platforms

For the coding part, I used HackerRank and solved a beginner-level problem. It was simple, but it gave me an idea of how coding platforms work. At first, I was unsure, but after trying once, it felt manageable. For the second part, I created a Google Form with five questions related to digital literacy. It was interesting to think about what kind of questions could be asked to others. I also checked the responses section, which showed how data can be collected easily. These tools can be useful for both learning and group work in academics.

Task 4: Email Etiquette

In this task, I wrote two emails, one to a professor for requesting an extension and another for an internship inquiry. While writing them, I understood the importance of using a proper tone and clear subject line. A small mistake in communication can sometimes create confusion or leave a wrong impression. For example, if a student writes an email without greeting or in a rude tone, the professor may not respond positively. It is always better to be polite and clear while writing emails.

Task 5: Cybercrime Awareness

For this task, I worked on a case study related to UPI fraud. While going through different examples, I realized how common these cases have become nowadays. Many people lose money just because they trust unknown messages or act in a hurry. One thing that surprised me was how easily someone can be tricked if they are not careful. After learning this, I feel I should be more alert while using online payment apps. Even small precautions like checking links or not sharing details can help avoid such problems.

Conclusion

Overall, this project was a good learning experience for me. It was not just about completing tasks, but also about understanding how to use digital tools properly in daily life. I learned about online safety, communication, and useful platforms. At some points, it felt a bit confusing, but after completing everything, I feel more confident now. This project also made me realize that being careful while using the internet is very important.
